P3… Growers' work
P4… About 🍎 Apples
P5… About 🍒 cherries
P6… Impressions after trying it
P7… Reasons to Come

Let me tell you about the fruits of our area!

Key Fertilizer

Growers use rice bran to achieve just the right flavor.I asked cherry farmers and they say rice bran is important! They use rice bran for apples too.

The apples look delicious !

REASONS TO COME TO THE NISIYAMAGATA AREA

The Nishiyamagata area is rich in nature. Because it's so rich, fruits flourish. I think nature is abundant, there are animals, and fruit grows well. The city is great, but in places like Nishiyamagata is rich in nature. So I definitely want you to come to Yamagata and try delicious fruit.

*'Kite kerona' is the Yamagata dialect for 'come to Yamagata'

You should definitely come to Yamagata.

Why Apples Are Popular

The reason apples are popular is they contain nectar. That's why apples are so popular. When they grow, they become like the tree below. Once they become a tree, you can take photos and enjoy it.

Appetizing Apples and Cherries.

Why Yamagta Cherries are well-known

First, the deliciousness of cherries:
1. You can taste sweetness and acidity.
2. They are small and cute
3. They are easy to eat

Next about leaves : Growers gather them the with rubber bands to make a gap. This allows sunlight to reach the fruit, helping the cherries grow and turn red.

Impressions 🍹 after trying plums and apples

Plums : The pit was sour, but it testes just right!

Apples : I visited local farme's field in 4th grade, I tried apple juice.

P6

What I learned from Mr. Nishimura, a plum grower.

This is what Mr. Nishimura told us:
Plums are red, aren't they?
Why do you think they're red?
The answer is …

When they become red enough, "sunlight". However, we spread white sheets. That sheets absorbs the sunlight to prevent many spots from forming.

This is Sumomo served at school lunch. It was delicious~! 😊
